31-08-26 16:44	3.52	13.80	14.00																

The table above indicates the maximum permissible draft at which a container vessel can be berthed on the specified date. To accommodate drafts exceeding 14.0m (fair Season) / 13.50 m (foul Season) at GP-3 and 14.50 (fair season) / 13.50 m (foul season) at GP-4, the vessel must berth during the highest tide of the day at the respective container berth.

To utilise the day's maximum permissible draft, the vessel should berth at GP-3 or GP-4 based on the tidal height corresponding to the specific date and time reflected in the tables above.

As per the Safe Memo:

Fair weather limits: up to 14.80m at GP-4 and 14.20 m at GP-3.
Foul weather limits: reduced to 14.00 m at GP-4 and 13.80 m at GP-3.

These limits ensure compliance with under-keel clearance requirements—minimum 10% of the vessel's draft within the inner harbour channel, and 0.50m UKC at the berth during fair weather.
